Work Experience

Application Developer · **Tandem Studios** Nov 2024 – Present
Junior Application Developer Oct 2023 – Nov 2024

- Led the modernization of a 25-year-old psychometric assessment platform by redesigning the database architecture, migrating decades of production data, and implementing secure role-based access controls for assessment administrators and end users.
- Delivered features across multiple client projects, including independently designing and implementing a payment-tracking system for a mature ERP platform under tight deadlines, introducing database architecture improvements to support scalability.
- Built and maintained responsive Angular front-ends for enterprise web applications, developing reusable components with Angular Material UI and integrating them with .NET REST APIs.
- Designed and developed enterprise web applications and RESTful APIs across multiple .NET architectures, including ASP.NET MVC, Razor Pages, and Vertical Slice Architecture.
- Managed deployment and maintenance of cloud-hosted applications on Microsoft Azure, including production releases, framework upgrades, and ongoing platform support.
- Wrote unit and integration tests for new features and existing legacy code, contributing to automated testing coverage across .NET projects.
- Worked in a Kanban-based Agile workflow using Jira, partnering with clients, project managers, and QA to refine requirements into user stories, participating in peer code reviews, and delivering features on schedule.

Graduate Research Assistant · **University of Calgary** Oct 2021 – Dec 2024

- Developed Python-based data processing pipelines for neuroimaging research, applying scientific computing, statistical analysis, and network algorithms to process and analyze complex experimental datasets.
- Independently led the creation of a GitHub-based research codebase from scratch for a newly established lab, enabling reproducible neuroimaging analysis workflows and standardizing codebases across student projects.
- Collaborated with researchers from non-computer science backgrounds to translate experimental requirements into computational workflows and ensure correct implementation of neuroscience analysis methods.

Developer Internship · **Dynamik** Jun 2022 – Sep 2022

- Collaborated with interns at Dynamik to design and build an end-to-end supply chain optimization solution, reducing manual operational overhead through system automation.
- Rapidly learned .NET 6 and applied relational database design principles to develop backend services, including REST APIs and data pipelines with web scraping and external data preprocessing.

Data Modeling Co-op · **Suncor Energy** May 2018 – Aug 2019

- Designed and implemented data marts and data models in SAP Hana to support business operations, integrating sensor and external data sources to enhance pipeline monitoring and inventory management systems.

Skills

Programming Languages

C#, JavaScript, TypeScript, SQL, Python, HTML, CSS

Libraries & Frameworks

ASP.NET, EF Core, Angular, Angular Material UI, jQuery, Telerik Kendo UI, Razor Pages

Tools & Platforms

Git, GitHub, Azure, Jira, Visual Studio, Visual Studio Code, SSMS, Figma, Postman

Education

University of Calgary

M.S. Computer Science
2020 – 2024

B.S. Computer Science
2013 – 2020

B.S. Physics (Honors)
2013 – 2020
