Work Experience

Application Developer · **Tandem Studios** Nov 2024 – Present
Junior Application Developer Oct 2023 – Nov 2024

- Led the modernization of a 25-year-old psychometric assessment platform by redesigning the database architecture, migrating decades of production data, and implementing secure role-based access controls for assessment workflows and user permissions.
- Designed and developed enterprise software solutions across multiple .NET architectures, including ASP.NET MVC, Razor Pages, and Vertical Slice Architecture, building REST APIs and full-stack web applications with automated testing practices.
- Collaborated closely with clients, project managers, and developers to translate business requirements into secure, reliable software while troubleshooting production issues and delivering features on schedule.
- Managed deployment and maintenance of cloud-hosted applications on Microsoft Azure, including production releases, framework upgrades, and ongoing platform support.
- Delivered features across multiple client projects, including independently designing and implementing a payment-tracking system for a mature ERP platform under tight deadlines, introducing database architecture improvements to support scalability.

Graduate Research Assistant · **University of Calgary** Oct 2021 – Dec 2024

- Developed Python-based data processing pipelines for neuroimaging research, applying scientific computing, statistical methods, and network analysis to process complex experimental datasets.
- Built a GitHub-based research codebase from scratch to enable reproducible analysis workflows and collaborated with researchers to translate experimental requirements into reliable computational solutions.

Operating Systems TA · **University of Calgary** Sep 2020 – Apr 2023

- Taught data structures, algorithms, and time complexity concepts, helping students understand efficient solutions through analysis of time and memory complexity.
- Mentored students in debugging and optimizing C++ implementations, including multi-threaded programming concepts and runtime performance improvements.

Developer Internship · **Dynamik** Jun 2022 – Sep 2022

- Collaborated with interns at Dynamik to design and build an end-to-end supply chain optimization solution, reducing manual operational overhead through system automation.
- Rapidly learned .NET 6 and applied relational database design principles to develop backend services, including REST APIs and data pipelines with web scraping and external data preprocessing.

Data Modeling Co-op · **Suncor Energy** May 2018 – Aug 2019

- Designed data models and data marts integrating operational and external data sources to support enterprise reporting and business decision-making.

Skills

Programming Languages

C#, JavaScript, TypeScript, SQL, Python, HTML, CSS

Libraries & Frameworks

ASP.NET, EF Core, Angular, Angular Material UI, jQuery, Razor Pages, Telerik Kendo UI

Tools & Platforms

Git, GitHub, Azure, SSMS 21, Azure Data Factory, Visual Studio, Visual Studio Code, Figma, Postman

Education

University of Calgary

M.S. Computer Science
2020 – 2024

B.S. Computer Science
2013 – 2020

B.S. Physics (Honors)
2013 – 2020
